1 Introduction

lalala (Lalala, 1919).

2 Methods

dsds (Ds, 1919)

2.1 Conceptual Background

2.2 A Multi-Purpose Equivalence Estimator

The linear-logistic trigonometrically-scaled equivalence estimator:

$$\text{eq}(x, M) = x \{1 + M(1 - x) \exp[-b(x - M)]\}^{-\frac{M}{x}}, \quad (1)$$

$$b = \tan \left[\frac{\pi}{2} \cos^{M(1-M)} \left(\frac{\pi}{2} x(1 - M) \right) \right], \quad (2)$$

$$x, M \in [0, 1]. \quad (3)$$

2.3 Applications of the Equivalence Estimator

2.3.1 Career Interchangeability

$$\beta_{k,q} = \beta(s(\mathbf{a}_k, \mathbf{a}_q), M) = \text{eq}(s(\mathbf{a}_k, \mathbf{a}_q), M) \quad (4)$$

2.3.2 Attribute [Indispensability]

2.4 Data

3 Results

3.1 Centrality-Weighted Euclidean Matching

3.2 Similarity-Interchangeability Matrix

4 Discussion

dsdsds (dsdsds [ds], 1919)

5 Conclusion
